PROFESSIONAL SUMMARY

Senior Mobile Engineer with **7+ years** of software development experience, specializing in Flutter and Dart across Android and iOS. Experienced in building, deploying, maintaining, and improving production mobile applications for banking and logistics, with strong ownership of modules and end-to-end features. Hands-on experience with Clean Architecture.

CORE TECHNICAL EXPERTISE

Flutter & Mobile
Flutter, Dart, Android, iOS, Kotlin, Responsive UI, UI/UX

Backend & APIs
Node.js, TypeScript, REST, GraphQL, Dio, JSON, Firebase, Firestore, Cloud Functions

Testing & Quality
Unit, Widget, Integration Testing, Mockito, Riverpod Testing, SonarQube,

Performance & Observability
Firebase Analytics, Crashlytics, Sentry, NullPlatform,

Architecture & State
Clean Architecture, MVVM, Riverpod, BLoC/Cubit, Provider, GetX, Dependency Injection, BFF, Backend-Driven UI

CI/CD & Release
GitHub Actions, Android/iOS builds, QA/Staging deployments, flavors, environment configuration, release trains, rollbacks

Work Experience

ITTI - Mobile Software Engineer

May2024 - Present | UenoBank

Large-scale digital banking application serving 5M+ users across 3 countries, with approximately 12 modules and a primarily Flutter-based Android/iOS codebase.

- Design, develop, test, deploy, and maintain production mobile modules and end-to-end features using Flutter and Dart, including Home, Profile, Expense Analysis, Marketplace, Notifications, Surveys, and authentication refactoring.
- Implement solutions following Clean Architecture with Riverpod for dependency injection and state management, using Controllers, Presenters, Services, and Repositories.
- Develop and integrate BFF services with Node.js and TypeScript, working with REST and GraphQL, implementing endpoints and connecting backend services to the Flutter application.
- Build reusable internal Design System component libraries used across the application and by multiple teams, with package versioning, documentation, maintenance, and Widgetbook integration.
- Designed and implemented a Backend-Driven UI platform using backend-provided JSON to control supported screen structures, components, content, and animation configurations without requiring a new mobile release for every supported update.
- Implement complex Stories and Reels experiences with dynamic promotional content, autoplay, previews, interactive controls, vertical/horizontal navigation, and custom preloading strategies to reduce loading delays. • Maintain approximately 90% test coverage through Unit, Widget, and Integration Testing with Mockito and Riverpod Testing; enforce code quality through SonarQube and CI/CD.
- Manage GitHub Actions pipelines covering tests, linting, code quality checks, Android/iOS builds, and QA/Staging deployments; participate in release preparation, versioning, flavors, rollback procedures, and post-release monitoring.
- Coordinate biweekly release trains across 8 repositories and 3 shared libraries, managing dependencies, versioning, documentation, deployment evidence, and production readiness.
- Analyze crashes and device/platform behavior using Firebase, Sentry, and NullPlatform, including memory usage, application size, endpoint behavior, request patterns, and loading performance.

Pickit - Mobile Software Engineer

Apr 2022 - May 2024 | Pickers

Production logistics application with 100K+ Google Play downloads, an operational base of 50K+ drivers, and deployment across 5 countries.

- Developed and maintained production features with Flutter and Dart, with Kotlin for Android-specific work when required.
- Developed Tracking, Maps, Package Management, and Proof of Delivery from scratch and owned the end-to-end delivery workflow.
- Implemented delivery flows covering package confirmation, photographic proof, signatures, failed deliveries, package returns, driver shift booking, and payment information.
- Worked within Clean Architecture using MVP, Entities, Repositories, Use Cases, Controllers, and Presentation layers, with Dependency Injection using GetX.
- Built REST API integrations with Dio and integrated Google Maps and Waze, including dynamic route planning based on distance and delivery priority.
- Implemented regionalized behavior across Mexico, Chile, Brazil, Argentina, and Colombia, adapting language, currency, addresses, maps, branding, logistics configuration, and business rules.
- Created and maintained Unit and Widget Tests using Mockito, achieving approximately 70% test coverage.
- Used Firebase Analytics, Crashlytics, and Sentry for analytics, crash analysis, and production troubleshooting.
- Managed QA releases and the Google Play release process, participating in code reviews, estimation, mentoring, technical decisions, backend coordination, and releases.

Government of the Province of Neuquén - Software Developer

Apr 2019 - Mar 2022 | Neuquén, Argentina

- Began professional development with Flutter around the Flutter 1.0 era, alongside React Native and React-based work.
- Designed, developed, deployed, populated, and maintained Guía Estudiantil 2020 and Nqn Vincula using Flutter, Firebase, Firestore, and Firebase Cloud Functions.
- Developed internal Flutter applications for tablet and web focused on question-and-answer activities for student training and events.
- Contributed to ANDES Neuquén using React Native, modifying forms, wording, data-entry screens, vaccination records, and COVID-19 swabbing/testing flows.
- Applied MVVM with Provider to Flutter applications and worked primarily across frontend/mobile and Firebase-based solutions.
- Provided additional technical support including computer maintenance, networking, and end-user support.

EDUCATION

- Bachelor ofComputer Information Systems - National University of Comahue | 2018 - 2022
- Industrial Engineering - Undergraduate Coursework - University of Mendoza | 2013 - 2017

SELECTED TRAINING

- Flutter Advanced - Udemy |
- Flutter: Design and Animations - Udemy
- Detailed Programming in Dart - Udemy
- Android Development - Udemy
- iOS Development - Udemy
- EF SET English Certificate - C1 Advanced
